This is the image on Amazon:

We want to imbed that image in our post, so that the shooting stick is easily seen and gives us a better image of what we are talking about.

Here are the steps to imbed an image in a post WITHOUT uploading the FILE or saving it to .jpg (universal format for images), do the following:

1) Go to [www.google.com](http://www.google.com) and search for "KIS-Stix", that returns this Google search:

[http://www.google.com/search?sourceid=navclient&ie=UTF-8&rlz=1T4GZAZ\\_enUS226US226&q=KIS%2dStix](http://www.google.com/search?sourceid=navclient&ie=UTF-8&rlz=1T4GZAZ_enUS226US226&q=KIS%2dStix)

2) The 1st link had the "KIS-Stix" on Amazon, which always has good pictures on THEIR server.

5.) highlight the file name with your mouse, which is in the "Address URL field on the

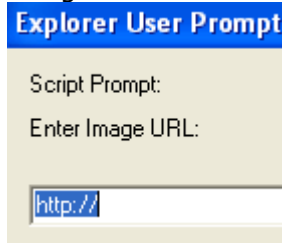

Properties of the Image":

This "string"

[http://ecx.images-amazon.com/images/I/61HaidgCeOL.\\_SL500\\_AA280\\_.jpg](http://ecx.images-amazon.com/images/I/61HaidgCeOL._SL500_AA280_.jpg) is now "selected".

Now do a "Control-C", that copies the URL to the Windows Paste buffer.

6) Now in your post choose the little "Image" Icon over on the RHS.

this pops up a "Explorer User Prompt"

the http:// is highlighted automatically

then hit Control-V (the Control-V, pastes the URL into the field)

this pastes the URL in the User Prompt

type a .jpg at the end of the URL if it doesn't have it (some servers append this automatically, but since your directly accessing this URL, it won't append it, you not using their navigation)

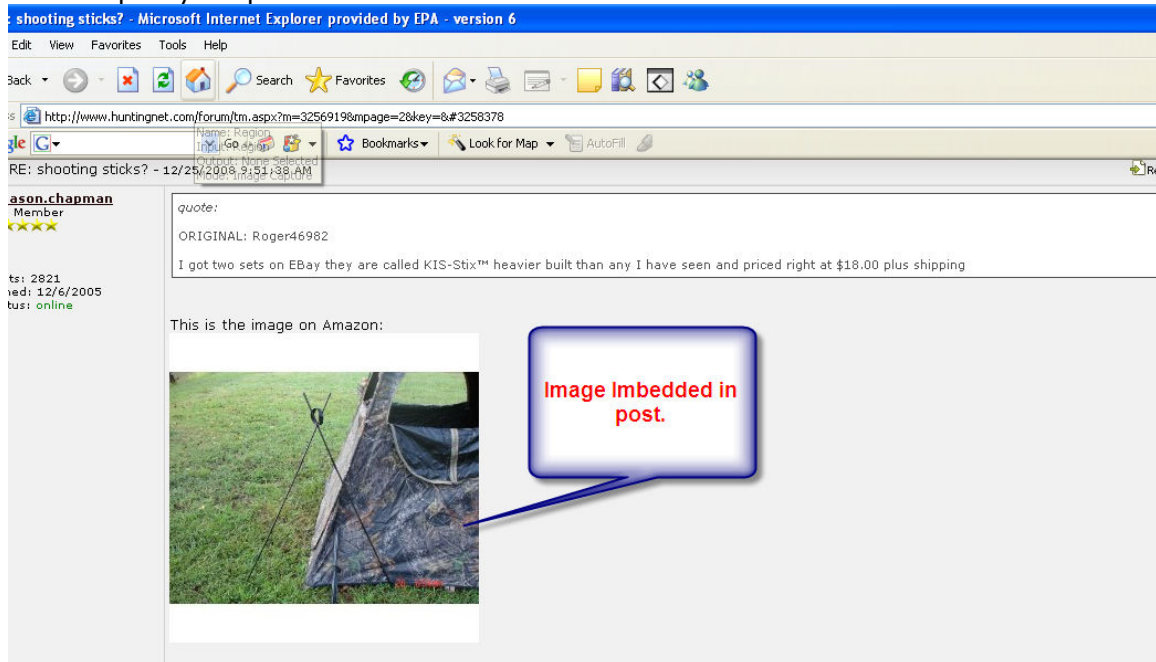

Hit the OK button

7) the image

[http://ecx.images-amazon.com/images/I/61HaidgCeOL.\\_SL500\\_AA280.jpg](http://ecx.images-amazon.com/images/I/61HaidgCeOL._SL500_AA280.jpg)

shows up in your post.

8) Your done. Now you try it yourself over here:
